OFFERINGS, CAPABILITIES, SOLUTIONS

As a comprehensive energy solutions company, Ameresco provides value-added energy efficiency, renewable energy, and infrastructure upgrade solutions to support our customers' unique requirements. Our core business is the development, design, engineering and installation of projects that reduce the energy and operations and maintenance (O&M) costs of our customers' facilities. These projects generally include a variety of measures that incorporate innovative technology and techniques, customized for the facility and designed to improve the

efficiency of major building systems, such as heating, ventilation, cooling and lighting systems, while enhancing the comfort and usability of the buildings. Such measures may include a combination of water reclamation, light-emitting diode (LED) lighting, smart metering, intelligent microgrids, battery storage, combine heat and power (CHP), the installation of renewable energy, and distributed energy options. Ameresco also offers budget-neutral solutions and provides the resources needed to successfully plan, execute and assist with financing each customer's energy project.

COMPANY HISTORY

Ameresco was founded in 2000 by George Sakellaris, a pioneer in the energy service business. Mr. Sakellaris' vision for Ameresco was to create a flexible and nimble independent company that provides its customers a broad range of customer-focused services with the stability to deliver on its promises. This vision has been instrumental in Ameresco's position at the forefront of influencing and reshaping the industry, and delivering customer satisfaction. In addition to organic growth, strategic acquisitions of complementary businesses and assets have been an important part of our development, and have enabled us to broaden our service offerings and expand our geographical reach.
