THE BOTTOM LINE ON CANDLEWOOD SOLAR

ENVIRONMENTALLY & ECONOMICALLY BENEFICIAL FOR NEW MILFORD

Each year, the Candlewood Solar Project will **generate 31 million kilowatt hours of clean, emission-free energy**, enough to power more than 2,400 homes a year.

The Candlewood Solar Project will **generate \$2.75 million dollars in tax revenue** for New Milford in just 20 years.

The 700% increase in taxes currently collected on Candlewood Lake would **allow New Milford to provide improved public services**, like road repairs and improved emergency services.

The Candlewood Solar Project will **reduce CO² emissions by the equivalent of more than 2.4 million gallons of gasoline**.

The facility will be emissions free, silent, and nearly invisible year-round to people enjoying Candlewood Lake, and it will not produce any radioactive materials or electromagnetic interference.

The Candlewood Solar Project will provide local jobs through an agreement with New Milford to give preference to local firms and labor for site work and installation.

The Candlewood Solar Project will **permanently set aside up to 100 acres of land on Candlewood Mountain as a conservation trust**.

Electricity generated by the project will supply power to the local grid, **reducing the need for Connecticut utilities to buy expensive, fossil-fuel power** on high demand days.

CANDLEWOOD SOLAR IS A WIN-WIN FOR NEW MILFORD
